WINSELECT™

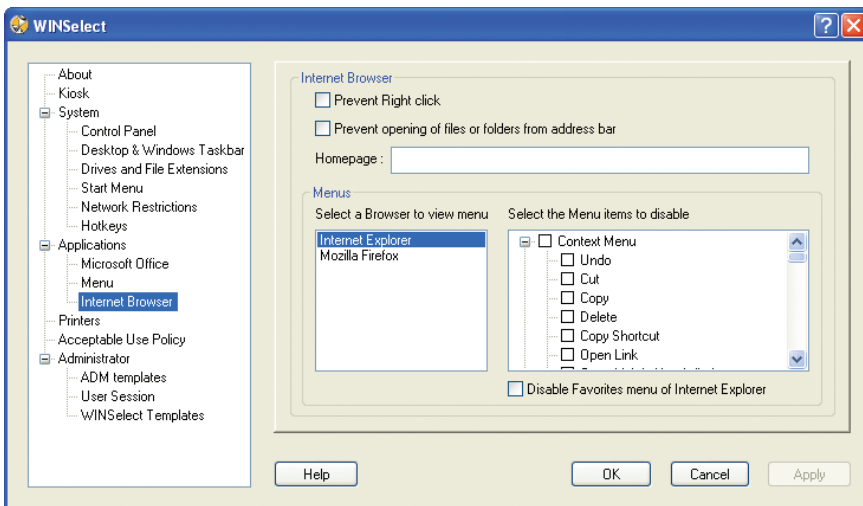

DYNAMIC PREFERENCE CONTROL

WINSelect

WINSelect makes it easy to manage the functionality of computers in a public access, kiosk, or library environment by delivering full control over computer system settings. IT administrators are able to easily customise a computer's capabilities by restricting user access to certain applications, websites, program functions, and system settings.

WINSelect is easy to deploy and use, allowing administrators to dynamically configure systems without the hassle and complexity of Group Policies. Administrators can also selectively control third-party programs, regulate user activity, and lockdown functions within the Windows operating system and applications.

WINSelect Benefits

- Empowers IT with total control over a computer's operating system and application abilities
- Ensures that computers are used for their given purpose
- Eliminates the hassle and complexity of locking down computers with Group Policies
- Reduces the amount of organisational time and money required to create kiosk computing environments
- Enables IT administrators to easily enforce Acceptable Use Policies

“WINSelect has completely taken away the day-to-day problems...it relieves my tech department from having to touch the machines for anything other than hardware issues. We spend little if no time on the machines that we have this installed on.”

- Tim Klan, Technology Supervisor, Garden City Schools.

Kiosk Options

- Automatically launch predetermined applications upon startup
- Block access to specific menu items and hot-key combinations
- Restrict access to any application on the workstation

Microsoft Office Application Functionality

- Prevent the use of Visual Basic for Applications and prevent access to VBA through Microsoft Office
- Prevent macro shortcuts within Microsoft Office programs
- Disable tools/add-in menu items to prevent users from enabling/disabling Microsoft Office add-in programs
- Disable the Web toolbar within Microsoft Office
- Disable the Detect and Repair option from the Help menu

Session Timer Settings

- Create time-limited user session
- Decide whether users have the option to extend session limits
- Create multiple time segments that reference codes for users to input

Regulate Start Button Functionality

- Hide the Start Button
- Disable Start Button right-click functionality
- Customise which options are available via the Start Menu
- Force the Classic style Start Menu to remove the Control Panel, Printer, and Network Settings from the menu option

Control Panel and Desktop Restrictions

- Restrict access to user accounts
- Hide any desktop icon
- Prevent right-clicks on desktop icons

Windows Explorer Restrictions

- Prevent drag and drop functionality
- Prevent delete, rename, and folder creation
- Restrict access to UNC path

Internet Explorer Restrictions

- Control which features and options are available within Microsoft Internet Explorer 6 & 7 and Mozilla Firefox 1.5 and 2
- Prevent right-clicks within the browser
- Prevent users from changing the default homepage
- Prevent Microsoft Office from being launched via the execution of Office application files
- Provide all KIOSK mode options
- Create a list of allowed or restricted web sites by domain name, IP address, or range of IP addresses and domain names
- Prevent users from using the address bar to access files

Open, Save, and Print Options

- Control read access with the option to block saving data to the Hard Drive, Floppy Drive, CD, DVD and USB devices
- Control or block network and web-based data storage
- Restrict the opening and saving of files with specific file extensions
- Restrict user access to specific printers
- Restrict the number of pages a user can print

Active Directory Template Integration

- Import ADM templates for Active Directory to control any Microsoft product
- Import Microsoft Vista GPO's to control workstation functions

WINSelect Templates

- Export all configurations into a secure file
- Use template files to easily deploy standard settings to multiple workstations
